

Sharing the story of a true NICU fighter Baby was born merely at 27 weeks gestational age and faced almost all the complications a preterm baby can face. His birth weight was 800grams. He was admitted for 45 days and could finally be discharged with a great smile on parents faces. After 1 year baby has gained weight to 10 times its original weight at birth (8kg) We are grateful to the Dr Ajay Harit Sir and our NICU team who has put in all the efforts to ensure baby goes home safely. Also we respect parents for the patience and their trust in our team. Finally the almighty God who has made the child live a normal life.
